

VS

# Jenkins - History

- 2005 - Hudson was first release by Kohsuke Kawaguchi of Sun Microsystems
- 2010 – Oracle bought Sun Microsystems
  - Due to a naming dispute, Hudson was renamed to Jenkins
  - Oracle continued development of Hudson (as a branch of the original)

# Jenkins

CI/CD tools used

CI/CDelivery tools used by participants

# Installing and Configuring Jenkins

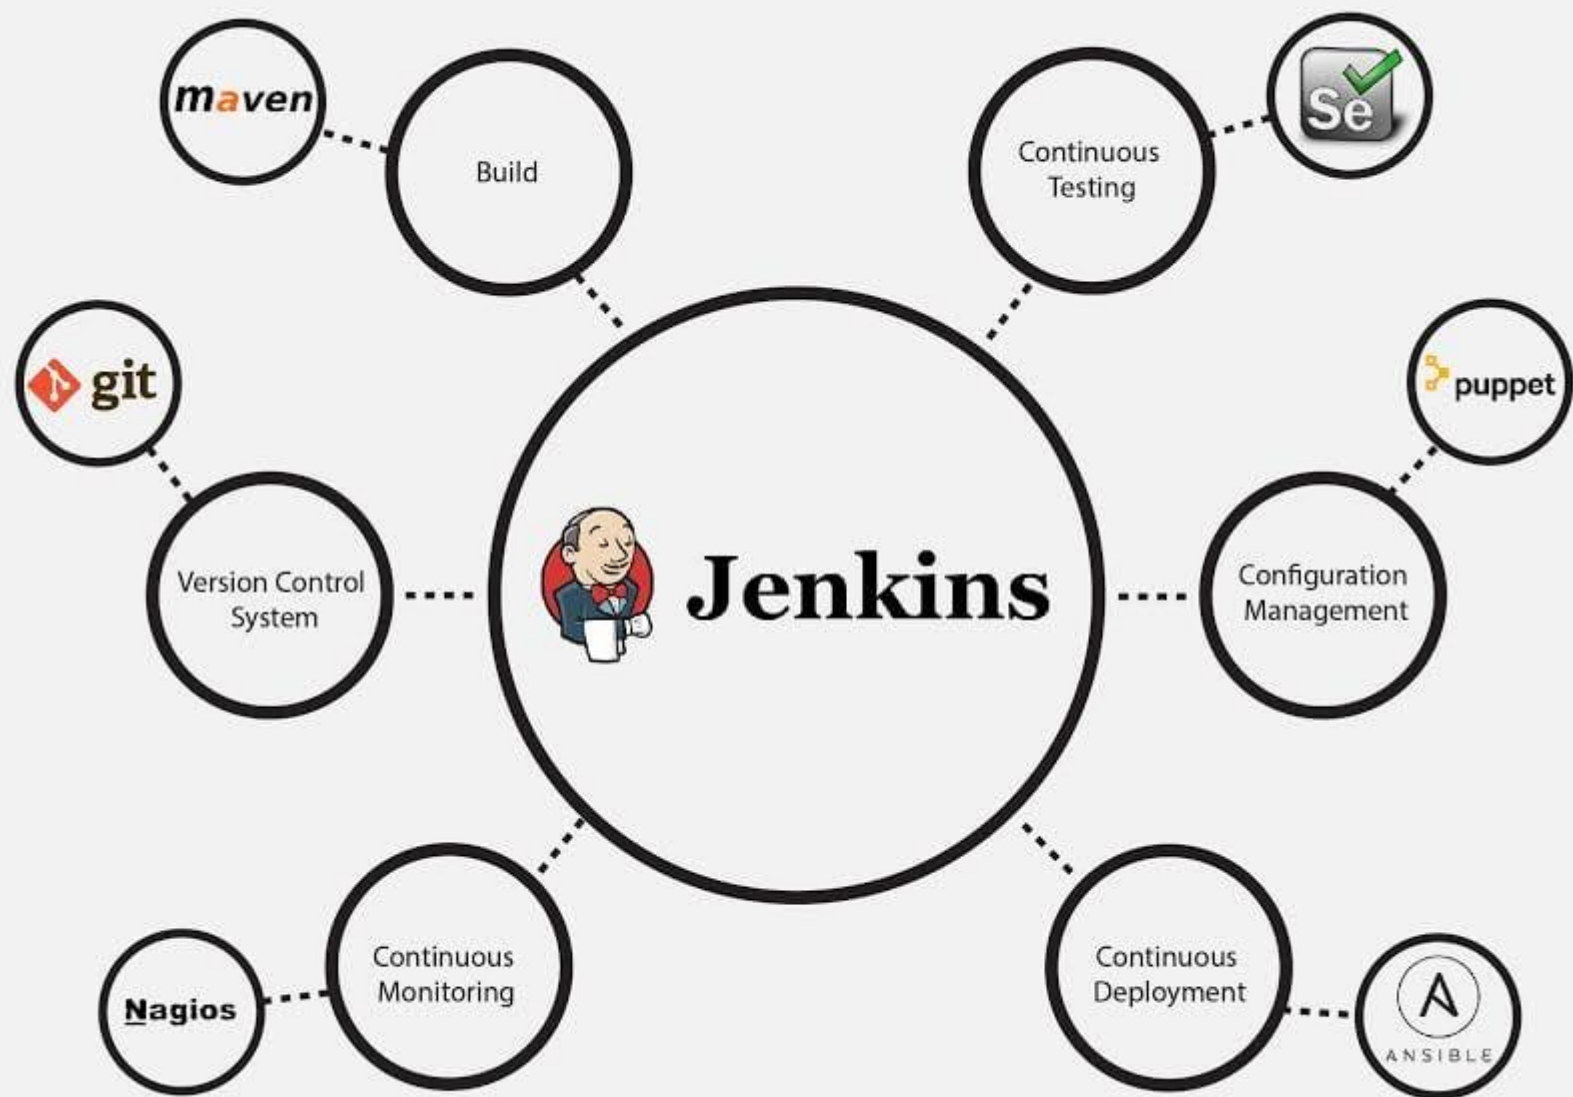

JDK	JDK 1.7 or above
Memory	2 GB RAM (recommended)
Disk Space	No minimum requirement. However, all builds will be stored on the Jenkins machines, it has to be ensured that sufficient disk space is available for build storage.
Operating System Version	Jenkins can be installed on Windows, Ubuntu/Debian, Red Hat/Fedora/CentOS, Mac OS X, openSUSE, FreeBSD, OpenBSD, Gentoo.
Java Container	The WAR file can be run in any container that supports Servlet 2.4/JSP 2.0 or later.(An example is Tomcat 5).

# Jenkins

- Branched from Hudson
- Java based Continuous Build System
- Runs in servlet container
  - Glassfish, Tomcat
- Supported by over 400 plugins
  - SCM, Testing, Notifications, Reporting, Artifact Saving, Triggers, External Integration
- Under development since 2005
- <http://jenkins-ci.org/>

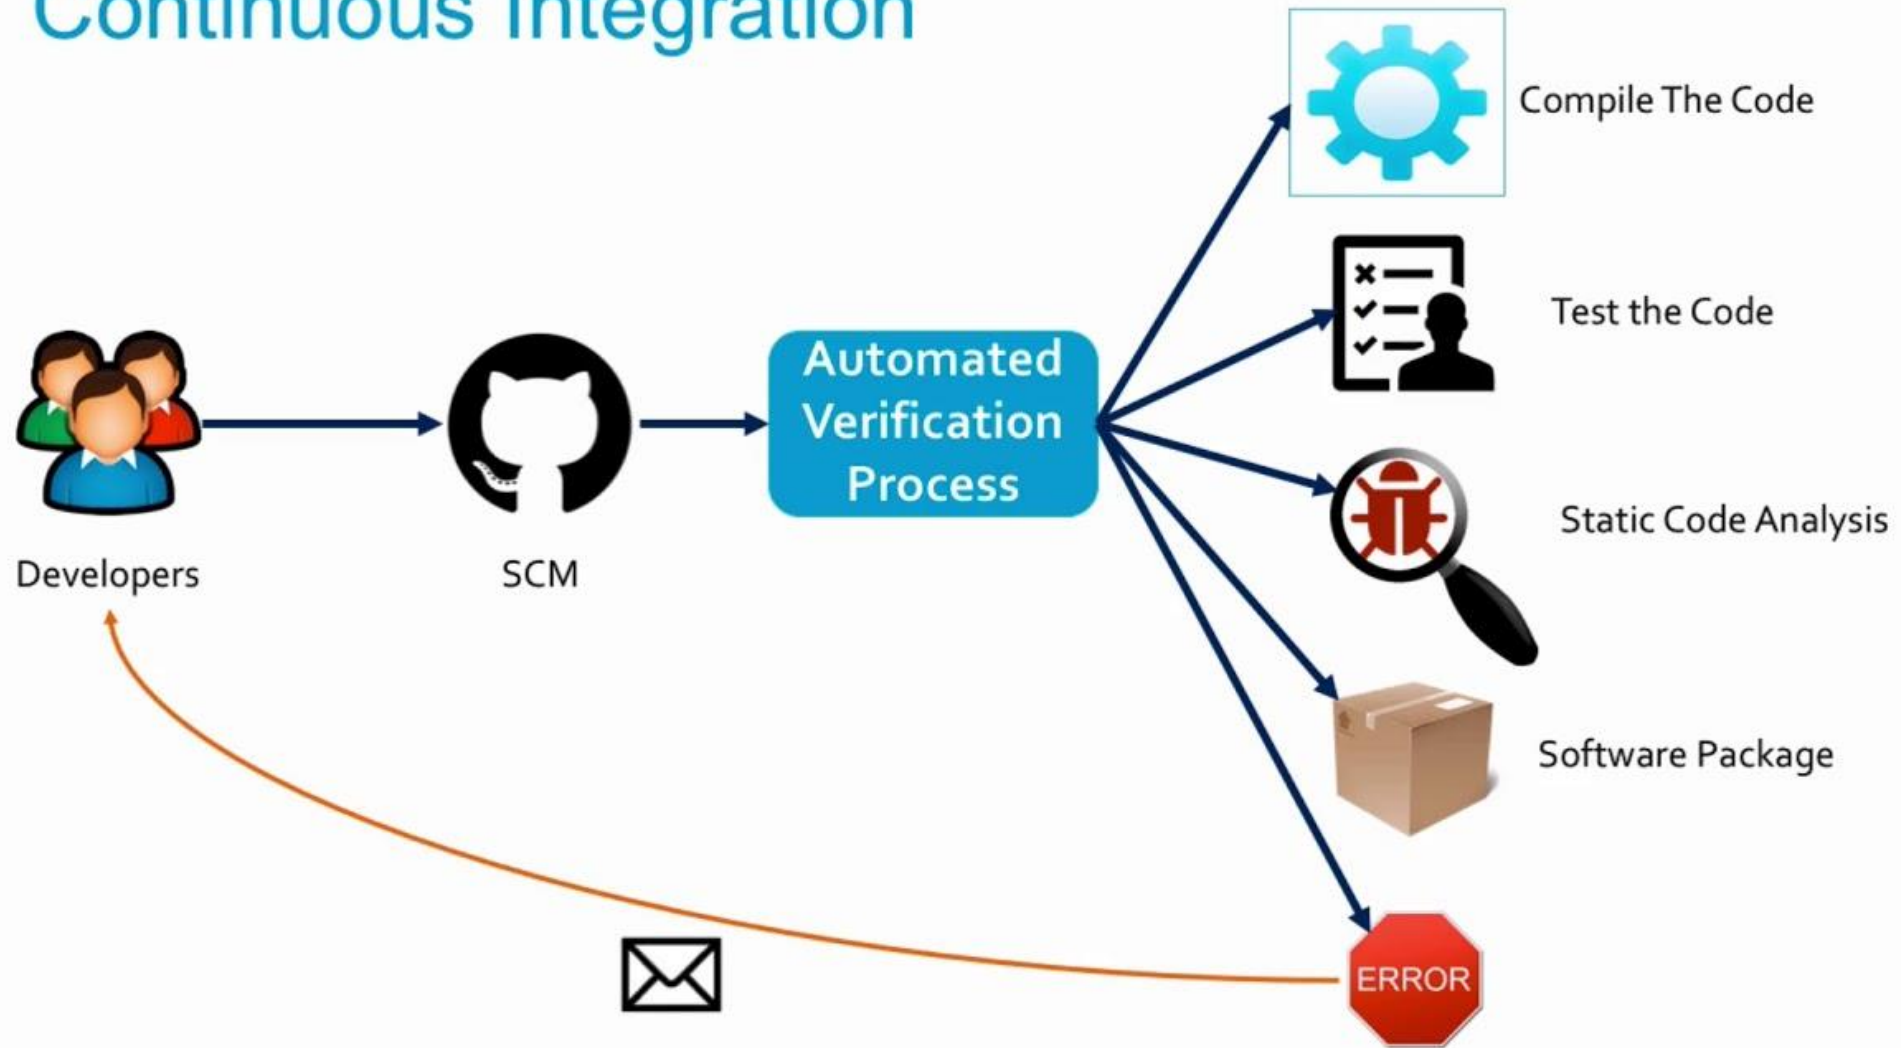

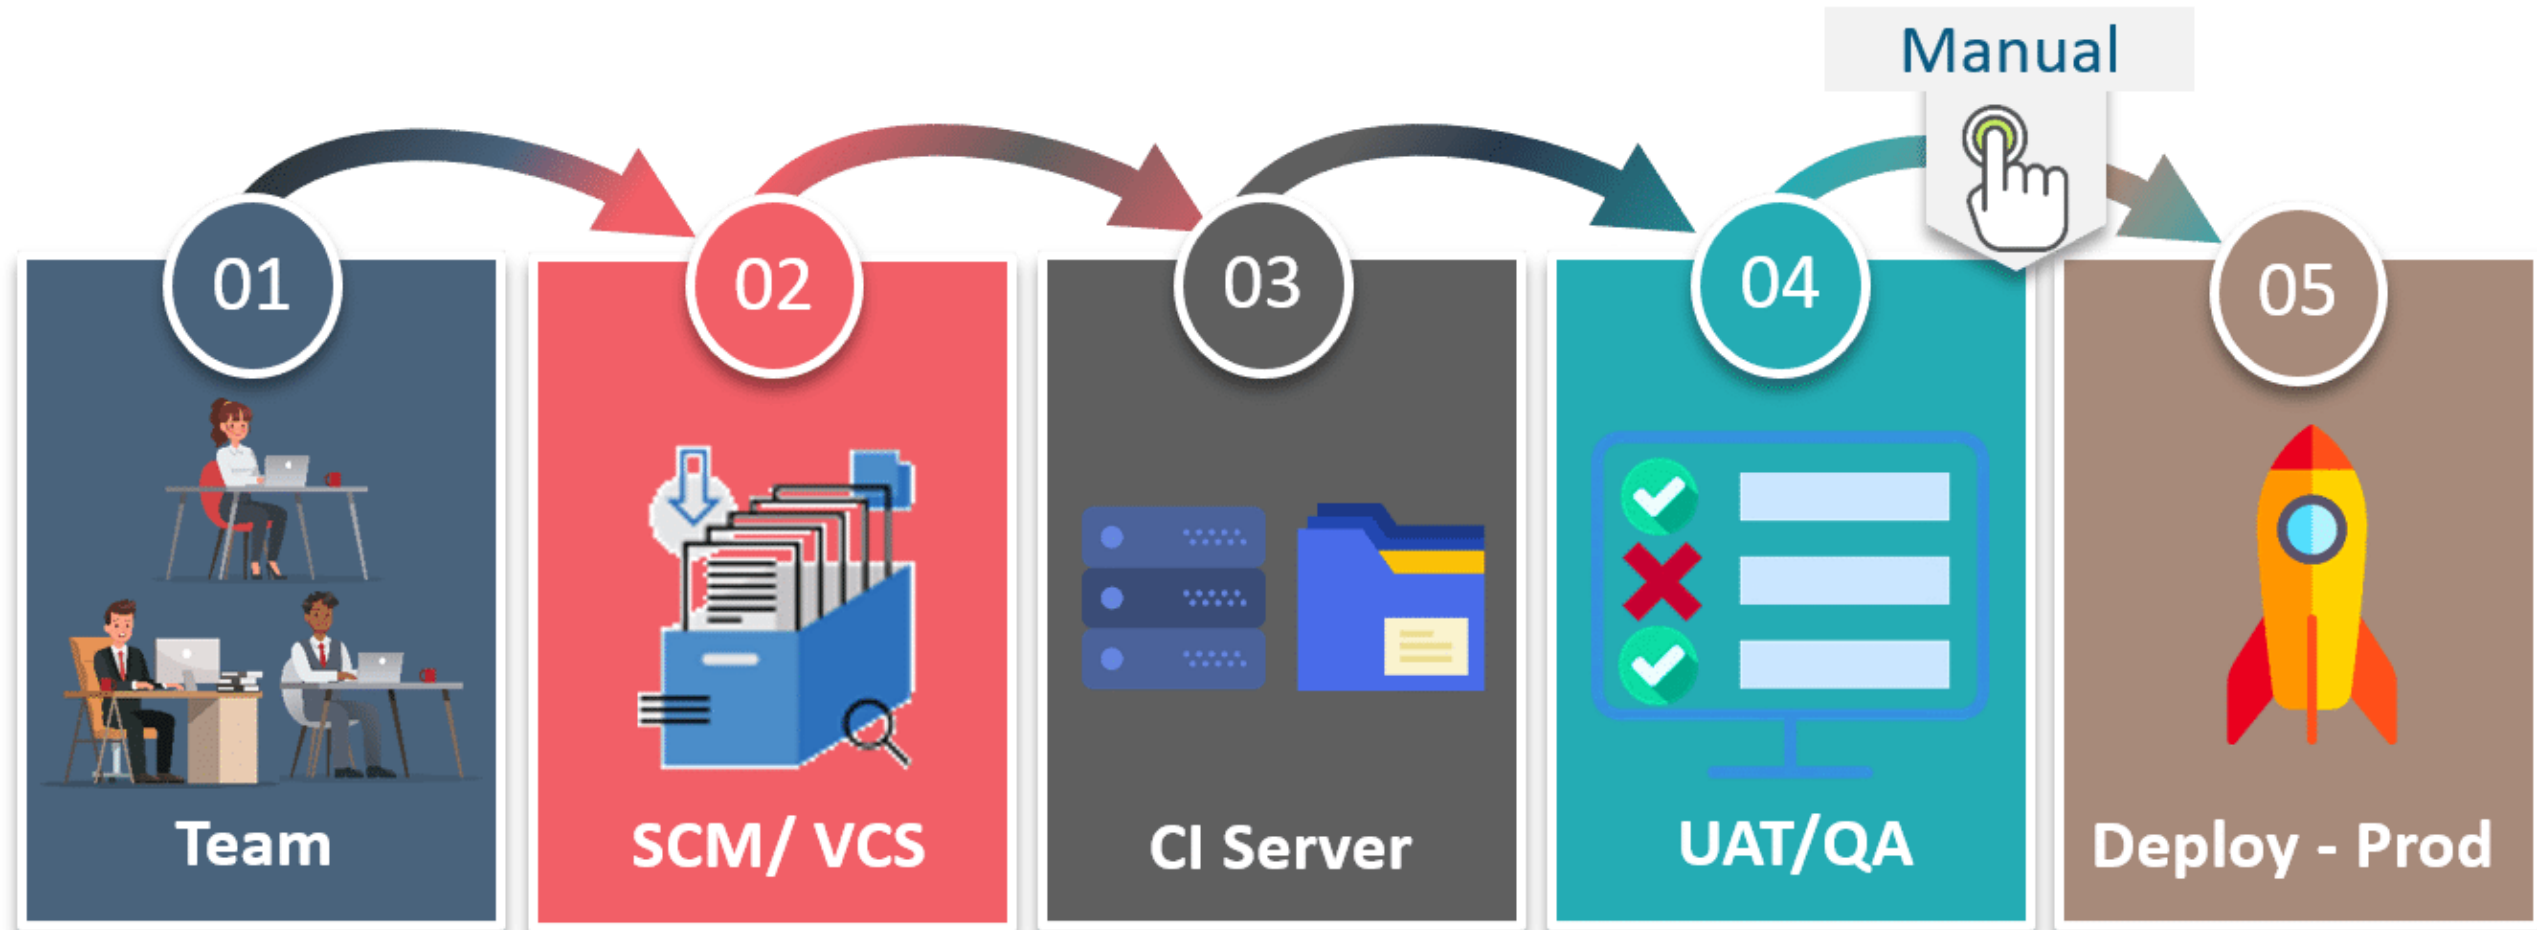

Before Jenkins	After Jenkins
<p>The entire source code was built and then tested. Locating and fixing bugs in the event of build and test failure was difficult and time consuming, which in turn slows the software delivery process.</p>	<p>Every commit made in the source code is built and tested. So, instead of checking the entire source code developers only need to focus on a particular commit. This leads to frequent new software releases.</p>
<p>Developers have to wait for test results</p>	<p>Developers know the test result of every commit made in the source code on the run.</p>
<p>The whole process is manual</p>	<p>You only need to commit changes to the source code and Jenkins will automate the rest of the process for you.</p>
